

G-1 (present and future)

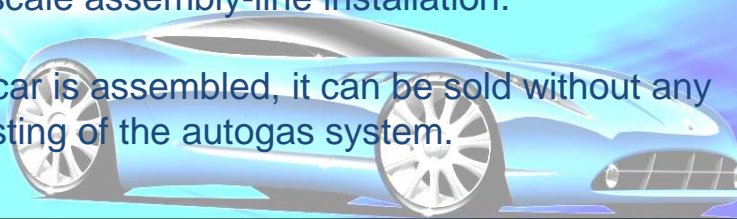

What sets our product apart from those of our competition is the fact that no mapping or calibration is needed after the system is physically installed.

perfection in simplicity

For this reason our product is the only one suitable for large scale assembly-line installation.

After the car is assembled, it can be sold without any further testing of the autogas system.

ADVANTAGES of G-1 autogas system

1. Real time injection
2. No mapping
3. No calibration
4. No computer setup
5. Autogas system is factory pre-set

ADVANTAGES of G-1 autogas system

6. The only available system that enables instalment without computer setting
7. Physical installation only
8. Aesthetic installation, performed in approximately 6 hours
9. After installation of autogas system cars can be sold to end costumers without further testing
10. Real time injection there enables lower loos of power in comparison with other competitive autogas systems

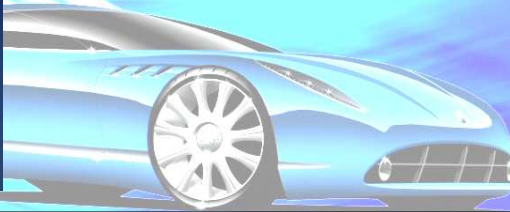

ADVANTAGES of G-1 autogas system

11. Real time injection enables optimal carburetion that results in better millage
12. Electronic regulator resist stability of pressure threwh all lifetime
13. Costumer does not need to return for new calibration or mapping correction
14. Your costumer will have no need to return until the next appointed service date
15. Patented technology

We aim to manufacture superior quality components.

Every product undergoes strict quality tests. We understand our corporate responsibilities and are committed to your and end-user's satisfaction.
